

### **AMENDMENTS TO THE ABSTRACT**

Please cancel the Abstract section of the specification and replace with the following:

A digital certificate issuing system with intrusion tolerance ability and the issuing method thereof are disclosed. The system comprises an offline secret key distributor, at least one online task distributor,  $k$  online secret share calculators and  $m$  online secret share combiners. And the method includes: splitting a private key into multiple first sub-secret-keys and multiple second sub-secret-keys, wherein the private key is constructed by one second sub-secret-key and  $t$  first sub-secret-keys, the second sub-secret-key corresponds to the  $t$  first sub-secret-keys according to an equation combination representation, and the number  $t$  is a positive integer; calculating  $t$  first calculation results according to the certificate to be signed and the  $t$  first sub-secret-keys in the multiple first sub-secret-keys upon receiving a certificate to be signed; obtaining the second sub-secret-key corresponding to the  $t$  first sub-secret-keys according to the equation combination representation; calculating a second calculation result according to the second sub-secret-key obtained and the certificate to be signed; generating a digital signature according to the  $t$  first calculation results and the second calculation result; generating a digital certificate according to the digital signature and contents of the certificate to be signed.
